

End Behavior and Orientation HW

Describe the end behavior and orientation of each function. Use function notation.

1) $f(x) = -x^2 - 4x$

2) $f(x) = x^3 - 3x^2 - 1$

3) $f(x) = x^5 - 4x^3 + x - 1$

4) $f(x) = x^2 - 4x$

5) $f(x) = -2x^2 + 8x - 3$

6) $f(x) = -x^5 + 4x^3 - 5x - 2$
